

# Isco Sampling Systems for Water Quality Monitoring

Whether your monitoring requirements are basic or complex, Isco has a sampling and data logging system that will do the job. Efficiently, reliably, and with the world-class service and support you expect from the leader in water sampling technology.

## Stormwater Monitoring

- with rainfall measurement and data logging
  - 4-bottle configuration for “first flush” collection and three 1-hour composite samples
  - Rain gauge and/or liquid level sampling initiation
- with flow monitoring and data logging
  - 4-bottle configuration for “first flush” collection and three 1-hour composite samples
  - Choose from 4 flow measuring technologies for any open-channel condition

## TMDL and Watershed Studies

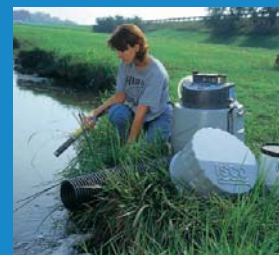

- Integrated sampling, flow, rainfall, and water quality parameters
- High-capacity data logging
- Multi-bottle sampling

## Communication Options

- Modems for data retrieval, dial-out alarms and remote sampling commands
  - land-line connection
  - digital cellular
- Spread-spectrum digital radio
- Model 581 Rapid Transfer Device (RTD)
- Isco’s exclusive Flowlink software
- Strato-Link satellite communication for data retrieval, dial out alarms, and remote sampling commands

Call or e-mail today for a price quotation on a complete system tailored to your specific project.
