

What our Customers are Saying...

Jared T. Shaw, Ph.D.

Professor and Chair
Department of Chemistry
University of California

I've trusted Teledyne ISCO products for nearly two decades and will continue to do so indefinitely!

What problem did you need to solve?

We often need rapid purification of small quantities of organic compounds for collaborative projects. And during the pandemic, my students need to multitask with limited time in lab, so allowing CombiFlash® to run while they do other experiments is especially helpful!

How did you find working with Teledyne ISCO?

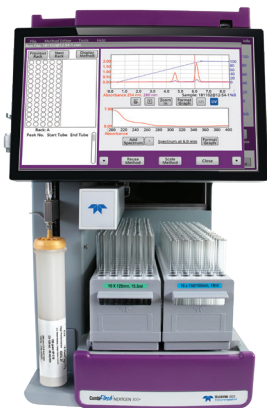

I have worked with ISCO, and later Teledyne ISCO, since 2002 and have always had great customer service, instrument trouble shooting, and generally helpful advice. I tend to be a brand loyalist, and with the great interactions I have had with Teledyne ISCO, I have not really explored competitors' products!

How have you benefited from the process?

Although the use of disposable cartridges is a little more expensive for an academic lab, it enables rapid results, multi-tasking, and better separation for tough mixtures. Additionally, many of my students leave my group for the pharmaceutical industry, where they often walk into a lab with Teledyne ISCO products in use, so they are better trained for this transition.

What would you say if you were recommending us to another company?

I've trusted Teledyne ISCO products for nearly two decades and will continue to do so indefinitely!
