

What our Customers are Saying...

Dr. Chris Kershaw
Senior Chemist
Cancer Research UK
Manchester Institute
Drug Discovery Unit

“We have found the NextGen 300+ system an indispensable piece of kit and enables us to perform much larger scale reverse phase purifications than before.”

What problem did you need to solve?

We had been using the CombiFlash® Rf and Rf+ units for several years using normal phase cartridges. We wanted to expand our capabilities to be able to make use of reverse phase conditions on a scale larger than our existing preparative HPLC system but did not really know where to start.

How was the problem addressed?

After multiple useful and informative discussions with the Teledyne ISCO UK team, we decided on purchasing a CombiFlash NextGen system with an ELSD detector as a dedicated reverse phase system that was within budget and would suit our needs. The installation was efficient and went without any major disruption to the lab.

How did you find working with Teledyne ISCO?

Over the years working with the Drug Discovery Unit we have had a great working relationship with Teledyne ISCO. The team have always been very prompt to respond to any queries regarding their products and are also available for standard troubleshooting inquiries.

How have you benefited from the process?

We have found the NextGen 300+ system an indispensable piece of kit and enables us to perform much larger scale reverse phase purifications than before. The addition of the integrated ELSD detector allows us to easily isolate compounds without a UV chromophore. As the NextGen and CombiFlash Rf/Rf+ units can also be switched relatively easily between reverse and normal phase conditions we now have even more options to deal with the demands of our busy lab.

What would you say if you were recommending us to another company?

Very knowledgeable and friendly team who are there to help you with whatever your purifications needs are.
